New vaccines comprising Sp128 or Sp130 polypeptides, for treating and preventing pneumococcal infections, particularly infections caused by Streptococcus, e.g. otitis media, nasopharyngeal, bronchial, lung or blood infections.

Claim 8; Page 51-54; 54pp; English.

The invention relates to novel immunogenic polypeptides, Sp128 and Sp130 from S. pneumoniae. Vaccines comprising the polypeptides are useful for the treatment and prevention of pneumococcal infections, particularly infections caused by Streptococcus, such as ortitis media, nasopharyngeal bronchial, lung or blood infections. The antigens are used as immunogenic agents to stimulate an immune response. The antisera and antibodies may also be used in diagnosing and treating pneumococcal infections.

Recombinant polypeptides serve as a mechanism for stimulating production of antibodies for use in passive immunotherapy, diagnostic reagents, and

The proteins of a triple course by the maintain of the proteins of their homologues, derivatives and or fragments) are useful as immunogens or antigens. Immunogenic or antigenic compositions comprising the proteins are useful for the detection or diagnostic assays. The sequences are useful for the detection or diagnosis of S. pneumoniae infection, by contacting a sample to be tested with them. Agents cappalle of antagonising, inhibiting or interfering with the function or expression of the protein or polypeptide are useful in medical compositions in the treatment or prophylaxis of S. pneumoniae infection. As the sequences can be used to treat S. pneumoniae infection, the olderly, and in patients with has high rates in young children, the elderly, and in patients with predisposing conditions such as asplenia, heart, lung and kidney disease, diabetes, alcoholism,
                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New proteins and nucleic acid molecules from Streptococcus pneumoniae, useful as medicaments for treating or preventing a disease or infection due to streptococcus bacteria, such as pneumonia, sepsis, otitis media or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a protein comprising or having at least 50% identity to any of the 2469 amino acid sequences, identified in the specification (available on a computer readable format), or its fragment, expressed from 2469 of 2489 identified DNA coding regions from the Streptococcus pneumoniae type 4 strain genomic sequence appearing as ABS56454. Also included are an antibody which binds one of the proteins, treating a patient by administering the protein. DNA or antibody (in a composition), a kit comprising first and second primers, which are the nucleic acid cited above or fragments between nucleotides 8-100 of a sequence not defined in the specification, for amplifying a target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bacterial meningitis; pneumonia; sepsis; otitis media; ear infection; antiinflammatory; antibacterial; immunostimulant; auditory; respiratory; gene therapy; vaccine.

and a Streptococcus pneumoniae bacterium, where one or more genes encoding the proteins has been rendered inactive. The proteins, nucleic encid molecules, antibody and compositions are useful as medicaments for treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as pneumonia, sepsis, othis media or ear infection. They are also useful in developing vaccines, disgnostics and antibiotics. The methods are useful for identifying immunodominant proteins. The present sequence is one of the 2469 proteins expressed by the identified coding regions from the genomic sequence. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at figh, wipo.int/pub/published_pot_sequences. (Updated on 23-OCT-2003 to standardise OS field)
sequence contained within a Streptococcus nucleic acid sequence, where the first primer is substantially complementary to the target sequence and the second primer is substantially complementary to the complement of the target sequence, and where the parts of the primers having substantial complementarity define the termini of the target sequence to be amplified, assay comprising contacting a test compound with the protein.

This invention relates to novel nucleic acids encoding hyperimmune serum reactive antigens selected from peptides and serum reactive epitopse that can be used in pharmaceutical compositions that exhibit antibacterial activity. The present invention describes a composition (including the nucleic acid molecule, hyperimmune serum-reactive antigen or antibody) that is useful for manufacturing a madicament such as a vaccine, which can be used to treat or prevent bacterial infections, particularly S. pneumoniae infections that cause pharyngitis, otitis media, pneumonia, bacteraemia sepals and meningitis. The antigen or its fragment may also be used for isolating, purifying and/ or identifying an interaction partner of the hyperimmune serum reactive antigen, as well as for manufacturing a functional incleic acid selected from aptemers and from ribozymes, antisense nucleic acids selected from ribozymes, antisense nucleic acids selected from reactive antigen sequence is a Streptococcus pneumoniae hyperimmune serum reactive antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1963 HRVTVTIQNGKEMSSTIVSEEDFILPVYKGELEKGYQFDGWEISGFEGKKDAGYVINLSK 2022

                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to novel isolated Streptococcus pneumoniae nucleic acid molecules and the antigenic polypeptides encoded by them. The invention may be useful for the production of compounds with an antibacterial activity or for gene therapy. The nucleic acid molecules, compositions and methods disclosed are useful for treating Streptococcus pneumoniae infection. The present sequence is that of an S pneumoniae protein of the invention.

The invention relates to an isolated mucleic acid comprising a sequence encoding a Streptococcus pneumoniae ADR91366polypeptide, or its encoding a Streptococcus pneumoniae ADR91366polypeptide, or its cargements, with any of 9 fully defined sequences (appearing as ADR94308, ADR94489, ADR94800, ADR948017, ADR94809, ADR948017, ADR94809, ADR94800, ADR95214, ADR93039, ADR95233, ADR95623, ADR95620, ADR95600 or ADR94800, ADR94800, ADR94800, ADR95214, ADR93039, ADR95200, ADR95260 or ADR94800, at least 20 or 30 consecutive nucleotides sequence. The nucleic acid and proteins are chosen from 5206 disclosed sequences. The nucleic acid cited above operably linked to a transcription regulatory comprising at least 20 consecutive nucleotide or transcription regulatory comprising at least 20 consecutive nucleotides of the present sequences as cited above. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of pathological conditions resulting from bacterial infection by the present sequence is one of the 2603 disclosed S. Contiis media. The present sequence is one of the 2603 disclosed S. Contiis media. The printed specification, but was obtained in correct continual process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 460 HRVIVIIQNGKEMSSIIVSEEDFILPVYKGELEKGYQPDGWEISGFEGKKDAGYVINLSK 519

The invention relates to an isolated nucleic acid molecule for detecting, preventing or treating pathological conditions resulting from bacterial confreents infection. The isolated nucleic acid comprises: (a) any of the 2603 annoted the sequences of ARA57336; (b) a nucleotide sequence of ARA57336; (c) a nucleotide sequences of ARA57339; (c) a nucleotide sequence of at least 8 nucleotides in length, where the sequence is hybridizable to a nucleotide in length, where the sequence is consistence of at least 8 nucleotides in length, where the sequence is hybridizable to a nucleic acid having any of the nucleotide sequence of a properably linked to a transcription regulatory element; (a) a cell comprising the recombinant expression vector; (3) producing an consisting of at least 8 nucleotides of any of ARA57336 to ARA57389; (5) treating a subject for 8. pneumoniae polypeptide; (4) a probe comprising a nucleotide sequence consisting of at least 8 nucleotides of any of ARA57336 to ARA57389; (5) treating a subject for 8. pneumoniae polypeptide or its selected from ARA57389; (5) treating a nucleotide of a sequence of a streptococcus nucleic acid or polypeptide; (7) a vaccine composition of an 8. pneumoniae polypeptide or its enfection, computer readable medium having recorded the nucleotide sequences of ARA57389; (10) a computer based system for identifying fragments of the Streptococcus genome of commercial importance. The composition and methods are useful for diagnosing, preventing or treating computer represents a 8. pneumoniae of from the patement for methods are useful for diagnosing, preventing or treating computer represents a 8. pneumoniae of the printed specification, but was obtained in electronic format firent firent from the negation, but was obtained in electronic format direction.
                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid molecules and encoded polypeptides useful for diagnosing, preventing or treating bacterial infections, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              460 HRVTVTIQNGKEMSSTIVSEEDFILPVYKGELEKGYQPDGWEISGFEGKKDAGYVINLSK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2080
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated Streptococcus pneumoniae nucleic acids and polypeptides. The nucleic acids and proteins are useful for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, such as S. pneumoniae infection. These may also be used for drug screening procedures. The present sequence represents a Streptococcus preumoniae polypeptide of the invention. Note: The sequence data for this patent did not appear in the printed specification but was obtained in electronic format directly from USPTO at

```
The present sequence represents a protein from Streptococcus pneumoniae.

The nucleic acid sequence encoding the Streptococcus pneumoniae protein
can be useful in vaccines for inducing protective antibodies against
Streptococcus pneumoniae, for treatment or prevention of infection e.g.
care used to detect Streptococcus infection (by usual hybridisation or
amplification methods), also for isolating Streptococcus genes or that
amplification methods), also for isolating Streptococcus genes or that
albit variants. The protein can be used similarly to detect specific
antibodies in standard immunossays, especially for diagnosing or
monitoring infections. Antibodies which bind the protein are used to
detect corresponding antigens, to purify the protein and for passive
immunisation (optionally coupled to a toxin). Vaccines are administered,
e.g. by injection, orally or through the skin, typically at 0.01-1000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    KKONPOVNHSQLNESHRKEDLOREEHSOKSDSTKDVTATVLDKNNISSKSTTNNPNK 144

The invention relates to an isolated polynucleotide consisting of a Streptococcus pneumoniae nucleic acid (appearing as ADC45122 and encoding SP028) one of 113 disclosed nucleic acids encoding 113 S. pneumoniae antigens. Also included are making a recombinant vector by inserting the nucleic acid into a vector, an isolated polynucleotide consisting of at least 50 or 100 contiguous nucleotides of the SP028 nucleic acid, and a recombinant host cell comprising the SP028 polynucleotide. The nucleic acids are useful as DNA vaccine against Streptococcus pneumoniae infection (e.g. pneumonia). Nucleic acids derived from the S. pneumoniae antigen nucleic acids are useful as probes for use in diagnostic methods for detecting S. pneumoniae gene expression. The present sequence represents an S. pneumoniae antigenic protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Staphylococcus epidermidis SR1 strain; infection; diagnosis; vaccination; endocarditis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              28 YKGELEKGYQFDGWEISGFEGKKDAGYVINLSKDTFIKPVFKKIEEKKEEENKPTFDVSK 87

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABQ84792 to ABQ84904 represents nucleic acids which encode the Streptococcus pneumoniae antigens given in ABP54557 to ABP54669. The S. pneumoniae antigens have antibacterial activity and can be used in vaccines. The S. pneumoniae antigens can also be used to prevent or attenuate a Streptococcal infection in an animal. The polymucleotides encoding the S. pneumoniae antigens can be used to detect Streptococcus nucleic acids. ABQ84905 to ABQ85130 represent primers used in the cloning of S. pneumoniae ORFs (open readding frames) which are used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                           New Streptococcus pneumoniae antigens, useful for detecting Streptococcus and for preventing or attenuating disease caused by Streptococcus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      28 YKGELEKGYQPDGWEISGFEGKKDAGYVINLSKDTPIKPVFKKIEEKKEEENKPTFDVSK 87

                                                                                                                                                                                                                                                                                                                                                       ଚ
                                                                        ANH52104 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG8120, from Staphylococcus epidermidis. (I) and have antibacterial activity and therefore can be used in vaccination. The nucleic acids (II) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the collypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH55098 treatment of S. epidermidis infections, e.g. endocarditis. AAH55098 polymucleotide sequences and primers which are used in the exemplification of the present invention. N.B. The present invention specifically claims all the polymucleotide sequences given in the sequence listing of the present specification, however the sequence is the present invention of the disclosure for SEQ ID NO:4454 so even though sequences are given in the control of the present specification, however the sequence is the present of the present specification.
                                                                                                                                                                                                                                                                                                                                                                                                                        8

ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      49 KKDAGYVIN--LSKDTFIKPVFKKIBEKKEBENKPTFDVS----KKKDNPQVNHSQLNES 102

The invention describes an isolated mucleic acid comprising a nucleotide sequence with any of 3772 fully defined nucleotide sequences (SEQ ID NO: 1-3772) and encoding an Staphylococcus epidemidis polypeptide with any of 3772 fully defined amino acid sequences (SEQ ID NO: 3772-7544) as given in the specification. Also described are: a recombinant expression vector of [1]; producing an S. epidermidis polypeptide, an isolated nucleic acid (I); producing an S. epidermidis polypeptide, an isolated nucleic acid a subject for S. epidermidis infection, comprising a nucleic acid cited above and a carrier; treating a subject for S. epidermidis infection, a subject for S. epidermidis infection, a subject for S. epidermidis infection, a subject for S. epidermidis infection; a subject for S. epidermidis polypeptide or its fragment; a vaccine composition for prevention or treatment of an S. epidermidis of infection; detecting the presence of a Staphylococcus nucleic acid in a sample; a computer readable medium having recorded in it the nucleotide sample; a computer readable medium having recorded in it the nucleotide sample; a computer based system for identifying fragments of the Staphylococcus genome of commercial importance; a computer based system for identifying fragments of the Staphylococcus genome and/or plasmids; and identifying an expression modulating fragment commercially important nucleic acid fragments of the Staphylococcus genome and/or plasmids; and identifying an expression modulating fragment compositions of the present invention are useful for the diagnosis, prevention and/or treatment of an Staphylococcal epidermidis botterial of the anino acid sequence of a S. epidermidis protein of the the anino acid sequence of a S. epidermidis protein of the the anino acid sequence of a S. epidermidis protein of
New isolated polypeptide and encoding nucleic acid derived from Staphylococcus epidermidis, useful for diagnosing, preventing and/or treating an S. epidermidis bacterial infection.
                                                                                                                               Claim 17; SEQ ID NO 5663; 741pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the invention.

The invention relates to a chimeric molecule that comprises a glutamaterach protein (GLURP) moiety consisting of a polypeptide fragment (amino acid residues 25-514) of GLURP (given as SRQ ID No:1) and a merozoite curface protein 3 (MSP3) moiety consisting of amino acid residues 212-380 of MSP3 (given as SRQ ID No:2), wherein the chimeric molecule raises attibodies against both polypeptides in mice immunized with it. Also described are: (i) a conjugate comprising the chimeric molecule of the invention bound to a solid support, (ii) an immunogenic composition comprising the chimeric molecule, the conjugate described above, or a mixture of GLURP and MSP3 antigens as an immunogen, (iii) a vaccine against malaria comprising the chimeric molecule, the conjugate described above, or a mixture of GLURP and MSP3 antigens as an immunogen, in association with a suitable vehicle, (iv) use of purified and/or recombinant anti-MSP3 and anti-GLURP antibodies, for the preparation of a mixture of GLURP antibodies. The chimeric molecule of the invention or a mixture of GLURP antibodies. The chimeric molecule of the invention or a mixture of GLURP antibodies. The chimeric molecule of the invention or a mixture of GLURP antibodies. The chimeric molecule of the invention or a mixture of GLURP and MSP3 antigens are useful for the preparation of a vaccine composition against malaria. This sequence represents plasmodium falciparum MSP3a to MSP3 fragment. Note: The present sequence given as SRQ ID No:7 in the Sequence Listing is not mentioned elsewhere in the specification.
                                                                                                                                                                                                                            Chimeric molecule useful for preparing vaccine composition against malaria, comprises glutamate-rich protein GLURP and Merozoite surface protein 3 MSP3 moleties, and raises antibodies against moieties in mice immunized with molecule.
                                                                                                                                                                                                                                                                                                                                                                          Disclosure; SEQ ID NO 7; 79pp; English.
                                                                                                                                                                         WPI; 2005-355821/36.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠે
                                                                                                                                                                                                                       The present invention relates to the protection against malaria. More particularly, the invention pertains to a family of MSP-3 (merozoite surface protein 3)-like genes (MSP-3-1, MSP-3-3, MSP-3-3, MSP-3-3, MSP-3-4, MSP-3-6, MSP-3-6, MSP-3-7, MSP-3-9) located on chromosome 10 of Plasmodium falciparum, highly conserved in P. falciparum strains, simultaneously proteins which have a Asn-Leu-Arg-Asn or Asn-Leu-Arg-Isp signature at their N-terminal extremity and which are located at the merozoite surface. The characterization of this gene family enables the definition of immunogenic and vaccine compositions against P. falciparum. The present sequence is the P. falciparum MSP-3-1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         60 KDTPIKPVPKKIEEKKEE-----ENKPTFDVSKKKDNPQVNHSQLNESHRKE 106

The invention relates a recombinant DNA construct comprising a polyperic polynucleotide having any of 5544 nucleotide sequences (CDNAs SEQ ID NO: 1-5544) and encoding a polypeptide with any of 5544 and according a polypeptide with any of 5544 and social sequences (SEQ ID NO: 5545-11088). The CDNAs and proteins are from corn, soybean, Arabidopsis, wheat and rape but the specification does not indicate which sequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming a plant with a recombinant DNA construct comprising promoter region complying a production in a plant cell operably joined to a polymodicating encoding a polypeptide associated with the property, and growing the transformed plant. The property is selected from improving plant cold tolerance, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for improving plant tolerance for indication of the cell cycle pathway, for improving plant tolerance to plant disease, for gulactomannan production, for production of plant tolerance to berbicides, for increasing the rate of chance combination in plants, for lightin production, for improving plant tolerance to extreme osmotic conditions, for improving plant colerance to extreme osmotic conditions, for improving plant colerance to extreme osmotic conditions, for improvement by modification of photosynthesis, for modifying seed protein yield and/or content, for modifying seed protein yield and/or content, for and for yield improvement by providing improved plant growth and development under at least one stress condition. The polynucleotide may also encode a plant transcription factor. The methods and compositions of the present invention are useful in the field of biochemistry and condition all plants in particular for producing transgenic plants with improvement plant plants in particular plants of the present invention are useful in the field of biochemistry and plant plants with improvement plan
                                                                                                                                                                                                                                                                                                                                                                                                                                   New recombinant DNA constructs useful in the field of biochemistry and genetics, and in particular for producing transgenic plants with improved biological characteristics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       132 GITEKAFENSPIEETSHRVDDNKRINNOKNFTAAKSSENAVSRVSFGADHKRAEVMGKFM 191

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ---- PQ 93
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           flow, increasing plant tolerance to cold or heat, improving plant tolerance to extreme osmocife and drought conditions, and improving plant tolerance to extreme osmocife and drought conditions, and improving plant tolerance to plant peets or pathogens. They rean also be used in physical arrays of molecules, plant breeding markers, computer-based storage and analysis systems. The present sequence is one of the 5544 plant protein sequences of the invention. Note: The sequence date for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      94 VNHSQLNE-----SHRKEDLQREEHSQKSDSTKDVTATVLDKNNISSKSTTNNPNK 144
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 HRVTVTIQNGKEMSSTIVSEEDFILPVYKGELEKGYQPDGWEISGFE------GKKDA

```
The invention relates to a chimeric molecule that comprises a glutamaterach protein (GLURP) moiety consisting of a polypeptide fragment (amino acid readidues 25-514) of GLURP (given as SEQ ID No:1) and a Merozoite surface protein 3 (MSP3) moiety consisting of amino acid residues 212-380 of MSP3 (given as SEQ ID No:2), wherein the chimeric molecule raises antibodies against both polypeptides in mice immunized with it. Also described are: (i) a conjugate comprising the chimeric molecule of the invention bound to a solid support, (ii) an immunogenic composition comprising the chimeric molecule, the conjugate described above, or a mixture of GLURP and MSP3 antigens as an immunogen, in association with a suitable vehicle, (iv) use of purified and/or recombinant anti-MSP3 and anti-GLURP antibodies, for the preparation of a medicament adainst malaria, and (v) a medicament for passive immunotherapy of malaria, and (v) a medicament for passive immunotherapy of malaria, comprising the anti-MSP3 and anti-GLURP cand MSP3 antighes are useful for the preparation of a mixture of GLURP cand MSP3 antighes and anti-MSP3 and anti-GLURP cand MSP3 antighes are useful for the preparation of a mixture of GLURP cand MSP3 antighes are useful for the preparation of a mixture of GLURP cand MSP3 antighes are useful for the preparation of a vaccine companison malaria. This sequence represents Plasmodium falciparum GLURP companisher cand MSP3 (212-380) fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       HRVTVTIQNGKEM-----GYQ 37

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a fusion protein comprising Plasmodium falciparum glutamate-rich protein (GLURP) coupled to P. falciparum merozoite surface protein 3 (MSP3). The GLURP-MSP3 fusion protein is useful as an antigen based vaccine against malaria. Also disclosed is the polynucleotide sequence encoding the GLURP-MSP3 fusion protein. The polynucleotide sequence is also useful in preparing a vaccine. The vaccine is useful in treating and preventing malaria and for inducing an immune response against malaria. The present sequence represents P. falciparum GLURP-MSP3 fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      90 DNPQVNHSQLN-------ESHRKEDLQREEHSQKSDSTKDVTATVLDKNNISSK 136

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a fusion protein comprising Plasmodium falciparum glutamate-rich protein (GLURP) coupled to P. falciparum merozoite surface protein 3 (MSP3). The GLURP-MSP3 fusion protein is useful as an antigen based vaccine against malaria. Also disclosed is the polynucleotide sequence encoding the GLURP-MSP3 fusion protein. The polynucleotide sequence is also useful in preparing a vaccine. The vaccine is useful in treating and preventing malaria and for inducing an immune response against malaria. The present sequence represents P. falciparum GLURP-MSP3 hybrid.

by chromosome 2 of the human malarial parasite, plasmodium falciparum.

Also described are: (1) nucleotide sequences ([I]) encoding ([]); and (2)

Caccines against P. falciparum infection comprising ([]) or ([I]). ([]) and

([I]) are useful for the development of vaccines against P. falciparum

infection. ([]) and polyclonal antisera or a monoclonal antibody raised to

fimmunogens comprising the sequences of ([]), are useful in the detection

of infection with P. falciparum. Furthermore, ([]) (sepecially when they

are rifins or secreted or membrane proteins) can aid the identification

of drugs to treat or prevent P. falciparum. Sequencing of the

plasmodium chromosome 2 and the subsequent identification of proteins

cencoded by it will help to expand our understanding of parasite biology,

a process hampered by the complexity of the parasitic lifecycle, and

provide new targets for vaccine and drug development. Parasite resistance

to drugs and mesquito resistance to insecticides have led to a resurgence

of malaria in many parts of the world, and there is a pressing need for

vaccines and new drugs. AAA70287 and AAB18352
The present invention describes proteins and their fragments (I) encoded
                                                                                                                                                                                                                                                                                                                         Plasmodium falciparum; chromosome 2; human malaria parasite; vaccine; antimalarial; malaria; protozoacide; infection; insecticide.

The present invention relates to a method for identifying candidate proteins in pathogens useful as anti-infectives. The invention discloses a computational method which involves the calculation of several sequence atributes and their subsequence analysis results in the identification of outlier proteins in different pathogens. The method is useful for the identification of outlier proteins (e.g. virulence proteins, antigens or proteins used as drug targets) in pathogenic organisms. The method of the invention provides reproducible results as it does not depend on the variable blochemical characterisation of proteins. ABO23500-ABO23617 represent outlier proteins identified from different pathogenic organisms
                                                              103
                                                                                  57

rich protein (GLURP) molety consisting of a polypebilde fragment (amino acid residues 25-514) of GLURP (given as SBQ ID No:1) and a Merozoite surface protein 3 (MSP3) molety consisting of amino acid residues 212-380 of MSP3 (given as SBQ ID No:2), wherein the chimeric molecule raises antibodies against both polypeptides in mice immunized with it. Also described are: (i) a conjugate comprising the chimeric molecule of the invention bound to a solid support, (ii) an immunogenic composition comprising the chimeric molecule, the conjugate described above, or a mixture of GLURP and MSP3 antigens as an immunogen, (iii) a vaccine against malaria comprising the chimeric molecule, the conjugate described above, or a mixture of GLURP and MSP3 antigens as an immunogen, in association with a suitable vehicle, (iv) use of purified and/or comprising the anti-GLURP antibodies, for the preparation of a medicament against malaria, and (v) a medicament for passive immunotherapy of malaria, and (v) a medicament for passive immunotherapy of malaria, comprising the anti-MSP3 and anti-GLURP and MSP3 antigens are useful for the preparation or a mixture of GLURP and MSP3 antigens are useful for the preparation of a vaccine composition against malaria. This sequence represents Plasmodium falciparum MSP3 protein (amino acid residues 212-380).

the 6113 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a

7;
compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense
                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antisense; prokaryotic essential gene; cell proliferation; drug design.

                                                                                                                                                                                                                                                                                                             PVPKKI BEKKEBENKPT-----FDVSKKKDNPQVNHSQLNESHRKEDLQREHSQKSDS
useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL016175) and the encoded proteins (ABB57377-ABB57272). The sequence data for this patent did not form part of the from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the artisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of agene in an operon required for proliferation or that has an activity against a biological pathway the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound a activity; (11) a culture comprising strains in which the scene or which each of the strains is present in a culture or collection of the which each of the strains is present in a culture or collection of product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for proliferation in cells other than S. strains; S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the tranget prockaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

hybrid polypeptide. This is an example of claimed hybrid polypeptide immunogens of the invention ADW8843-ADW88474 that comprise a modified S. aureus ORFOG57n sequence ADW88433-ADW88474 that comprise a modified S. aureus ORFOG57n sequence ADW88431-ADW88474 that comprise a modified S. obstitutions that increase sequence similarity to ORFOJ90 ADW88432. The hybrid polypeptides contain one or more epitopes for ORFOG57n and CRFOG57n and CRFOG57n and differences between native ORFOG57n and ORFOJ90 protein sequences. The invention also provides nucleic acids encoding these hybrid polypeptides, can amethod for evaluating the ability of an immunogen to produce a protective immune response against Staphylococcus infection using an animal (mouse or rat) model. The hybrid polypeptides having therapeutic and diagnostic applications, such as being used to provide protective immunity against S. aureus infection, being used to generate antibodies to detect the presence of S. aureus, and being used to generate antibodies to the rapertic antibodies that target S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      53 GYVINLSKDTFIKPVFKKIEEKKEBENKPTFDV----SKKKDNPQVNHSQLNESHRKED 107

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Š
                                                                                                                                                        The invention relates to a novel isolated miticals and molecule encoding a fibrinogen-binding polypeptide or its fragment, or an adhesion factor or its fragment. The invention further comprises a vector comprising the above nucleic acid molecule; a cell, preferably a host cell, comprising the above nucleic acid molecule; a process for producing the above to the depoye nucleic acid molecule; a process for producing the above properties or its fragment; a pharmaceutical composition, especially a vaccine, comprising the polypeptide or its fragment; a pharmaceutical composition, especially a vaccine, comprising the polypeptide or its fragment, or the opposition an antagonist capable of reducing or inhibiting the activity of the polypeptide or its fragment to its interaction partner; collypeptide or its fragment, capable of building to the oplypeptide or its fragment to its interaction partner; an antagonist identified by the above method; processes for in vitro collypeptide or its fragment, capable of building to the activity of the polypeptide or its fragment, and an affinity device comprising a support activity of the polypeptide or its fragment; and an affinity device comprising a support material and immobilized to the support material the above polypeptide or its fragment; and an affinity device comprising or generating cartial activity. The nucleic acids molecule from ribosymes, antisense mucleic antibacterial activity. The nucleic acids manufacturing or generating or generating a medicement, especially a vaccine against bacterial infections, especially a vaccine against bacterial or frequency or its fragment, or for generating an antical manufacturing a medicement, especially a vaccine against bacterial and vaccine and an antical or for generating an antical or for generating and or dentifying an interaction partner of the polypept
                                              New nucleic acid molecules and encoded adhesion factors and/or fibrinogen -binding polypeptides for diagnosing, preventing or treating bacterial infections, preferably Streptococcus agalactiae infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               57 NLSKDTFIKPVFKKIEEKKEEENKFTFDVSKKKDNPQVNHSQLNESHRKEDLQREEHS-- 114

The present invention relates to novel Streptococcus agalactiae
nucleotide sequences (I; ADV18199 and ADV813141-ADV85476) and
novel polypeptides (II; ADV18199-ADV81205-ADV81310). The
nucleotide sequences encode polypeptides of S. agalactiae involved in the
nucleotide sequences encode polypeptides of S. agalactiae involved in the
cucleotide metabolism including purines, pyrinidines and/or nucleosides,
nucleotide metabolism including purines, pyrinidines and/or nucleosides,
cucleotide metabolism including purines, pyrinidines and/or nucleosides,
cresulatory functions, replication, translation, protein
transport, adaptation to atypical conditions, sensitivity to medicines
and/or analogues, functions related to transposons, biosynthesis of
cofactors, prosthetic groups and transporters, cell membrane proteins and
cellular machinery. (I) are useful for the detection and/or amplification
of nucleic acids. Pharmaceutical formediation comprising (I) or (II) are
useful for treatment of a bacterial S. agalactiae infection. The complete
genome of Streptococcus agalactiae is given in ADV81204. Note: The
contains only 2344 sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             57 NLSKOTFIKPVFKKIEEKKEEENKP'FFDVSKKKONPQVNHSQLNESHRKEDLQREEHS-- 114

Intepresent intepresent (1; ADV78860-ADV78998 and ADV83341-ADV85476) and nucleotide sequences (1; ADV78809-ADV8103 and ADV81341-ADV85476) and nucleotide sequences encode polypeptides of S. agalactiae involved in the synthesis of amino acids, cell membranes, intermediate (central) concleotide metabolism, fatty acid and phospholipid metabolism, nucleotide metabolism, including purines, pyrimidines and/or nucleosides, regulatory functions, replication, transcription, translation, protein transport, adaptation to atypical conditions, sensitivity to medicines and/or analogues, functions related to transposons, biosynthesis of cofactors, prosthetic groups and transporters, cell membrane proteins and confinency. (1) are useful for the detection and/or amplification of nucleic acids. Pharmaceutical composition comprising (I) or (II) are useful for the detection. The complete genome of Streptococcus agalactiae is given in ADV81204. Mote: The present patent patent for the basic patent FR2824074Al, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | : :: | : : | | : : | | : | 321 NTEPLISYLENKEKFLVPNI PYKNKLILAREBDKYSFEDDEBERFGNELLSYNKLKUNEVLPV 380

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to novel Streptococcus agalactiae
nucleotide sequences (I; ADV87607-ADV87745) and novel polypeptides (II;
ADV87764-ADV89580). The nucleotide sequences encode polypeptides of S.
apustiv6-ADV89580). The nucleotide sequences encode polypeptides of S.
galactiae involved in the synthesis of amino acids, cell membranes,
intermediate (central) metabolism, energetic metabolism, fatty acid and
primidines and/or nucleosides, regulatory functions, replication,
transprintion, translation, protein transport, adaptation to atypical
conditions, sensitivity to medicines and/or analogues, functions related
to transpoorans, blospythesis of cofactors, prosthetic groups and
transporters, cell membrane proteins and cellular machinery. (I) are
useful for the detection and/or amplification of nucleic acids.
C pharmacoutical composition comprising (I) or (II) are useful for
treatment of a bacterial S. agalactiae infection. Note: WCO200292818A2 is
equivalent for the present basic patent FR2244074A1. WCO200292818A2
contains 6617 sequence whereas the present patent only contains 2344
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     57 NLSKOTPIKPVFKKIEEKKGEEENKPTFDVSKKKDNPQVNHSQLNESHRKEDLQREEHS-- 114
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Genomic nucleotide sequences encoding polypeptides of Streptococcus agalactiae for the development of vaccines, diagnostic tools, DNA chips and identification of therapeutic targets.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9 NGKEMSSTIVSEEDFILP--VYKGEL----EKGYQFD-----GWEISGFEGKKDAGYVI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                        Frangeul L, Lalioui L;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of a Staphylococcus aureus protein ORF0657n hybrid polypeptide. This is an example of claimed hybrid polypeptides a modified S. aureus ORF0657n sequence ADM88433-ADM88434 containing amino acid cubstitutions that increase sequence similarity to ORF0190 ADM88432. The hybrid polypeptides contain one or more epitopes for ORF0657n and differences between native ORF0657n and ORF0190 protein sequences. The invention also provides nucleic acids encoding these hybrid polypeptides, and anethod for evaluating the ability of an immunogen to produce a protective immune response against Esaphylococcus infection using an animal (mouse or rat) model. The hybrid polypeptides having therapeutic and diagnostic applications, such as being used to provide protective immunity against S. aureus, and being used to generate antibodies to therapeutic antibodies that target S. aureus.

The present sequence is that of a Staphylococcus aureus protein ORF0657n hybrid polypeptide. This is an example of claimed hybrid polypeptide immunogens of the invention ADM88439-ADM88474 that comprise a modified S. aureus ORF0657n sequence ADM88438 containing amino acid substitutions that increase sequence similarity to ORF0190 ADW88432. The hybrid polypeptides contain one or more epitopes for ORF0657n and ORF0190. They were designed by taking into account the similarity and differences between native ORF0157n and ORF0190 protein sequences. The invention also provides nucleic acids encoding these hybrid polypeptides, and amethod for evaluating the ability of an immunogen to produce a protective immune response against Staphylococcus infection using an animal (mouse or rat) model. The hybrid polypeptides having therapeutic and diagnostic applications, such as being used to provide protective immunity against S. aureus infection, being used to generate antibodies to detect the presence of S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel hybrid polypeptide immunogen comprising modified ORF0657n sequence, useful for inducing protective immune response in humans against Staphylococcus aureus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            35 SVENSESMMDTFVEH----PIKTG:[LNGKKYMVMKTTNDDYWKDFMVEGKR----VRTI 405

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   hybrid polypeptide. This is an example of claimed hybrid polypeptide immunogens of the invention ADM88433-ADW88474 that comprise a modified S. aureus ORFOGEN sequence ADM88433-ADW88474 that comprise a modified S. austitutions that increase sequence similarity to ORFO190 ADM88432. The hybrid polypeptides contain one or more epitopes for ORFO55n and CAPO190. They were designed by taking into account the similarity and differences between native ORFO55n and GAFO190 protein sequences. The invention also provides nucleic acids encoding these hybrid polypeptides, on a method for evaluating the ability of an immunogen to produce a protective immune response against Staphylococcus infection using an animal (mouse or rat) model. The hybrid polypeptides having therapeutic and diagnostic applications, such as being used to generate antibodies to detect the presence of S. aureus, and being used to generate antibodies to the rapeutic antibodies that target S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          465

hybrid polypetide. This is an example of claimed hybrid polypetide immunogens of the invention ADW88439-ADW88434 that comprise a modified sureus ORF0657n sequence ADW88433-ADW88438 containing amino acid substitutions that increase sequence similarity to ORF0190 ADW88432. The hybrid polypeptides contain one or more epitopes for ORF0657n and ORF0190. They were designed by taking into account the similarity and differences between native ORF0657n and ORF0190 protein sequences. The invention also provides nucleic acids encoding these hybrid polypeptides, and a method for evaluating the ability of an immunogen to produce a protective immune response against Staphylococcus infection using an animal (mouse or rat) model. The hybrid polypeptides having therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel hybrid polypeptide immunogen comprising modified ORF0657n sequence, useful for inducing protective immune response in humans against Staphylococcus aureus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of a Staphylococcus aureus protein ORF0657n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and diagnostic applications, such as being used to provide protective immunity against S. aureus infection, being used to generate antibodies to detect the presence of S. aureus, and being used to generate therapeutic antibodies that target S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NKPTPDV----SKKKONPQVNHSQLNESHRKEDLQ----REEHSQKSDSTKDVT-ATVL

The present sequence is that of a Staphylococcus aureus protein ORF0657n hybrid polypeptide. This is an example of claimed hybrid polypeptide immunogens of the invention ADW88433-ADW8844 that comprise a modified S. aureus ORF0657n sequence ADW88433-ADW8848 containing amino acid substitutions that increase sequence similarity to ORF0190 ADW88432. The hybrid polypeptides contain one or more epitopes for ORF0657n and differences between native ORF0190 protein sequences. The invention also provides nucleic acids encoding these hybrid polypeptides, invention also provides nucleic acids encoding these hybrid polypeptides, and amethod for evaluating the ability of an immunogen to produce a protective immune response against Staphylococcus infection using an animal (mouse or rat) model. The hybrid polypeptides having therapeutic and diagnostic applications, such as being used to generate antibodies to detect the presence of S. aureus; and being used to generate antibodies to therapeutic antibodies that target S. aureus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of a Staphylococcus aureus protein ORF0657n hybrid polypeptide. This is an example of claimed hybrid polypeptide immunogens of the invention hDW88439-ADW88444 that comprise a modified S. the invention above the invention and the increase sequence similarity to ORF0190 ADW88432. The hybrid polypeptides contain one or more epitopes for ORF0190 ADW88432. The corporate between native ORF057n and offerences between native ORF057n and orF0190 protein sequences. The invention also provides nucleic acids encoding these hybrid polypeptides, on a method for evaluating the ability of an immunogen to produce a protective immune response against Staphylococcus infection using an animal (mouse or rat) model. The hybrid polypeptides having therapeutic and diagnostic applications, such as being used to provide protective immunity against S. aureus, and being used to generate antibodies to therapeutic antibodies that target S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 355 SVENSESMMDTFVEH----PIKTGTLNGKKYMVMKTTNDDYWKDFMVEGKRVRTISKDA 409

The present sequence is that of a Staphylococcus aureus protein ORF0657n hybrid polypeptide denoted 0657nHybrid3. This is an example of claimed hybrid polypeptide immunogens of the invention ADW88439-ADW88434 that comprise a modified S. aureus ORF0657n sequence ADW88433-ADW88438 containing amino acid substitutions that increase sequence similarity to ORF0190 ADW88432. The hybrid polypeptides contain one or more epitopes or ORF0190 ADW88432. The hybrid polypeptides contain one or more epitopes for ORF0190 ADW88432. The hybrid polypeptides contain one or more epitopes of imilarity and differences between native ORF0657n and ORF0190 protein sequences. The invention also provides nucleic acids encoding these hybrid polypeptides, and a method for evaluating the ability of man immunogen to produce a protective immune response against Staphylococcus infection using an animal (mouse or rat) model. The hybrid polypeptides infection using an animal (mouse or rat) model. The hybrid polypeptides in animal (mouse or sat) section, being used to generate antibodies to detect the presence of S. aureus, and being used to generate therapeutic antibodies that target S. aureus.
